

SOUTH WALES POLICE

POLICY DOCUMENT FOR THE OVERT DEPLOYMENT OF

LIVE FACIAL RECOGNITION (LFR) TECHNOLOGY

Protective marking:	Official
Publication scheme Y/N:	No
Title:	Policy document for the overt deployment of Live facial recognition (LFR) technology
Version:	Version 1.3
Summary:	Guidance for SWP Deployment of Live Facial Recognition Technology.
Department:	Digital Services Division
Review date:	22/02/2026

Change control:

Version	Date	Authority	Evidence of approval	Record of change
0.1	30.03.2021	Project Lead	Ch. Insp. Scott Lloyd	Initial Draft
0.2	14.06.2021	DSD SMT Review	Ch. Supt Simon Belcher	Minor Amendments
0.3	04.11.2011	Project Oversight	Ch. Insp Scott Lloyd	Minor Amendments
0.4	09.11.2021	DSD SMT Review	Ch. Supt Simon Belcher	No Amendments

Terms & Definitions: Capitalised terms used within this LFR Guidance Document shall have the meaning given to them in section 2 of this document unless otherwise defined.

1 Introduction, Aim and Scope

Introduction

- 1.1 Live Facial Recognition (LFR) is used by South Wales Police as a precision crime-fighting tactic to locate people who are wanted for criminal offences and helps protect the most vulnerable in our society. More detail about how LFR works and how SWP uses it can be found in section 4 (LFR Overview).
- 1.2 This LFR Guidance Document provides SWP personnel with advice on the overt use of LFR in a legally compliant and ethical manner to enable SWP to achieve legitimate policing aims.
- 1.3 SWP is also cognisant of the views and ongoing considerations of the Information Commissioner, Biometrics Commissioner, and the Surveillance Camera Commissioner and has participated in the development of national guidance and a code of practice relating to LFR and its use by UK Law Enforcement Agencies (LEA).

Aim & Scope

- 1.4 This guidance aims to: -
 - a) provide SWP personnel and members of the public with information about SWP's present strategic, operational and technology objectives for the overt use of LFR, such that it enables SWP to achieve its law enforcement purposes and is compliant with key recommendations (the Objectives); and
 - b) provide SWP personnel with guidance on the Deployment of overt LFR technology by SWP in spaces accessible to the public to meet SWP's objectives for LFR; and
 - c) establish the governance structure for the Deployment of LFR, ensuring that SWP use of LFR is appropriately governed and legally compliant; and
 - d) provide an overview of LFR technology and advise on practical issues such as camera selection and placement in order to obtain the best performance from the LFR system.

Not in Scope

- 1.5 There are other forms of facial recognition technology (FRT) that are not subject of this guidance. This includes Retrospective Facial Recognition (RFR), which relates to non-real-time searching of Probe Images against an Image Reference database. Also, not in scope is Operator Initiated Facial Recognition (OIFR) where an officer takes a picture of a subject via a mobile device and submits it for immediate search. This is still fundamentally different from LFR in that a human operator has made the decision to submit a particular Probe Image for analysis.
- 1.6 In summary, this guidance does not extend to:-
 - a) manually instigated facial recognition for retrospective searching of video / still images; or
 - b) human initiated facial search submitted from a mobile device in near real-time; or
 - c) any SWP use of third-party LFR systems, or data sharing for the purpose of facilitating the use of those systems. In such instances additional privacy considerations would

be required (e.g. additional Information Sharing Agreements and audit requirements), which are beyond the scope of this guidance; or

- d) the legal framework that is applicable to SWP's use of LFR – this is separately detailed within SWP's Legal Mandate document.

Additional Documents

- 1.7 A number of documents are available to supplement this guidance and these include but are not limited to, the:-

- a) SWP LFR Standard Operating Procedure (SOP)
- b) SWP LFR Data Protection Impact Assessment (DPIA)
- c) SWP LFR Legal Mandate
- d) SWP LFR Appropriate Policy Documents
- e) SWP LFR Equality Impact Assessment
- f) SWP LFR Training Documents and User Guides.

2 Terminology

2.1 Within SWP and throughout SWP LFR Documents, the following terms and definitions apply in relation to Live Facial Recognition:-

Adjudication	A human assessment of an alert generated by the Live Facial Recognition (LFR) application by an LFR engagement officer (supported, as needed by the LFR operator) to decide whether to engage further with the individual matched to a watchlist image. In undertaking the adjudication process, regard is to be paid to subject, system and environmental factors.
Administrator	A specially trained person who has access rights to the LFR application in order to optimise and maintain its operational capability.
Alert	An Alert is generated by the Live Facial Recognition application when a facial image from the video stream is being compared against the Watchlist and returns a comparison Similarity Score above the Threshold setting.
Application Accuracy	Application accuracy can be considered to consist of the combined LFR technology accuracy and the human in the loop decision-making process. Accuracy is determined by measuring two metrics, the True Recognition Rate and the False Alert Rate. This is further explained below. The example given has been simplified to demonstrate the concept, but note that the metrics have been calculated in accordance with the agreed scientific method as set out by the International Organisation for Standardisation (<i>fig.1</i>):

(fig.1)

	True Recognition Rate	False Alert Rate
What is it?	It is the total number of times an individual(s) on a watchlist known to have passed through the Zone of Recognition, correctly generating an alert, as a proportion of the total number of times those individuals pass through the Zone of Recognition. This is regardless of whether an alert is generated by the LFR application or not.	Is the number of individuals that are not on the watchlist who generate a False Alert or Confirmed False Alert as a proportion of the total number of people who pass through the Zone of Recognition.
Worked Example	 The True Recognition Rate would be 90% if 10 people on the watchlist each pass the LFR system, and an Alert is generated correctly for 9 out of 10 of those people (with no alert being generated against the 10th person).	The False Alert Rate would be 0.1%, if for every 1,000 people that passed the LFR system, an Alert was generated against one person who was not on the watchlist. 

Authorising Officer (AO)	The Authorising Officer provides the authority for LFR to be used. LFR may not be used without this authorisation
Biometric Template	A digital representation of the features of the face that have been extracted from the facial image. It is these Templates (and not the images themselves) that are used for searching and which constitute biometric personal data. <i>Note that Templates are proprietary to each facial recognition algorithm. New Templates will need to be generated from the original images if the LFR application's algorithm is changed.</i>
Blue Watchlist	A Watchlist comprising known persons that can be used to test system performance. For example, police officers / staff may be placed on a Blue Watchlist and 'seeded' into the crowd who walk through the Zone of Recognition during a Deployment.
Candidate Image	The image of a person from the Watchlist returned as a result of an Alert.
Confirmed False Alert	Following an Engagement, it is determined that the Engaged individual is not the same as the person in the Candidate Image in the Watchlist.
Confirmed True Alert	Following an Engagement, it has been determined that the Engaged individual is the same as the person in the Candidate Image in the Watchlist.
Deployment	Use of an LFR as authorised by an AO to locate those on an LFR Watchlist.
Deployment record	An amalgam of the LFR application, the written authority document and the LFR cancellation report. This sets out the details of a proposed deployment including – but not limited to: a. location b. dates and times c. deployment and watchlist rationale d. legal basis e. necessity f. proportionality g. safeguards h. watchlist composition i. authorising officer j. resources k. relevant statistics l. outcomes m. summary of any issues n. Threshold Setting
Engagement	An officer communicating with a member of the public as a result of an Alert.
Environmental Factors	An external element that affects LFR application performance, such as dim lighting, glare, rain, mist.
Faces per frame	A configurable setting that determines the number of faces that can be analysed by the LFR application in each video frame.
Facial Recognition Technology (FRT)	This technology works by analysing key facial features, generating a mathematical representation of these features, and then comparing them against the mathematical representation of known faces in a database and generates possible matches. This is based on digital images (either still or from live camera feeds).

False Alert	When it is determined by the Operator that the Probe Image is not the same as the Candidate Image in the Watchlist, based on Adjudication without any Engagement. (The False Alert Rate is one of the two measures relevant to determining Application Accuracy).
False Alert Rate This is also referred to as 'False Positive Identification Rate'	The number of individuals that are not on the Watchlist who generate a False Alert or Confirmed False Alert, as a proportion of the total number of people who pass through the Zone of Recognition.
False Negative	Where a person on the Watchlist passes through the Zone of Recognition but no Alert is generated. There are a number of reasons False Negatives may occur. These include Application, Subject and Environmental Factors, and how high the Threshold is set.
Gold Commander	Is the officer who assumes overall command and has ultimate responsibility and accountability for the Deployment. (They are responsible and accountable for the policing operation/event and determine the strategic objectives).
Live Facial Recognition (LFR)	LFR is a real-time Deployment of Facial Recognition Technology, which compares a live camera feed(s) of faces against a predetermined Watchlist in order to locate sought by South Wales Police (SWP) by generating an Alert when a possible match is found.
LFR Engagement Officer	An officer whose role is to undertake the Adjudication process following an Alert, which may or may not result in that officer undertaking an Engagement. These officers will also assist the public by answering questions and helping them to understand the purpose and nature of the LFR Deployment.
LFR Operator	An officer or staff member whose primary role is operating the LFR system. They will consider Alerts and, via the Adjudication process, will assist LFR Engagement Officers in deciding whether an Alert should be actioned.
LFR System Engineer	A person who SWP deems to have suitable technical qualifications and experience to optimise and maintain the operational capability of SWP LFR system.
Possible Match	A person returned as a result of the Probe and Candidate Image being of sufficient similarity above the Threshold. Where the Similarity Score exceeds the Threshold Setting, an Alert will generate for consideration by the LFR Operator
Probe Image	A facial image which is searched against a Watchlist.
Recognition Time	The average time from when a face appears in the Zone of Recognition of the camera to when the LFR application generates an Alert.
Retrospective Facial Recognition (RFR)	A post-event use of Facial Recognition Technology, which compares still images of faces of unknown Subjects against an Image Reference Database in order to identify them.
Silver Commander	The officer who commands and coordinates the overall tactical implementation of the LFR Deployment in compliance with the strategy set by the Gold Commander. (The silver commander develops, commands and coordinates the overall tactical response of an operation, in accordance with the strategic objectives set by the gold commander).
Similarity Score	Is a numerical value indicating the extent of similarity between the Probe Image and Candidate Image, with a higher score indicating greater points of similarity.
Subject Factor	A factor linked to the individual. For example, the individual is wearing a head covering, is smoking, eating, or looking down at the time of passing the camera.
System Factor	A factor relating to the LFR application such as the algorithm.

Threshold	The configurable point at which two images being compared will result in an Alert. The Threshold needs to be set with care to maximise the probability of returning correct Possible Matches for Adjudication by the LFR Operator, whilst keeping the False Alert Rate to an acceptable level.
True Alert	A True Alert when it is determined the Probe Image is the same as the candidate image in the watchlist.
True Recognition Rate This is also referred to as the 'True Positive Identification Rate'	It is the total number of times an individual(s) on a Watchlist known to have passed through the Zone of Recognition, correctly generating an Alert, as a proportion of the total number of times those individuals pass through the Zone of Recognition (regardless of whether an Alert is generated). By way of an example, the rate would be 90% if 10 people on the Watchlist each pass the LFR system, and an Alert is generated correctly for 9 out of 10 of those people. The same would be true if 5 people each pass the LFR system twice, and 2 Alerts were correctly generated for 4 of the people and only 1 correct Alert for the 5th person
Urgency	In the context of authorising an LFR deployment, a Deployment that is related to an: Imminent threat-to-life or serious harm situation; <i>and/or</i> intelligence / investigative opportunity with limited time to act, where the seriousness and potential benefits support the urgency of action.
Watchlist	A set of known Candidate images against which a Probe image is searched. The Watchlist is normally a subset of a much larger collection of images (from the Image Reference Database) and will have been created specifically for the LFR deployment.
Zone of Recognition	A three-dimensional space within the field of view of the camera and in which the imaging conditions for robust face recognition are met. In general, the Zone of Recognition is smaller than the field of view of the camera, so not all faces in the field of view may be in focus and not every face in the field of view is imaged with the necessary resolution for facial recognition.

3 LFR Overview

LFR in a Law Enforcement Context

- 3.1 Live Facial Recognition (LFR) is used by SWP as a precision crime-fighting tactic to locate people who are wanted by SWP and/or the Courts. It helps us protect the most vulnerable in our community.
- 3.2 LFR also helps us locate those on a Watchlist, by monitoring facial images of people within a Zone of Recognition. Images from specially placed cameras are searched against a Watchlist of Candidate Images of people who are wanted, or based on intelligence are suspected of posing a risk of harm to themselves or others. Watchlist composition is normally restricted to individuals suspected to be in the proximity of an area, and therefore where there is some possibility or likelihood of an individual passing through an LFR Deployment.
- 3.3 LFR works by analysing key facial features to generate a mathematical representation of them. This representation is then compared against known faces in a database in order to identify Possible Matches against persons of interest to law enforcement agencies. Where the LFR application identifies a Possible Match, the LFR system flags an Alert to a trained member of SWP personnel who then makes a decision as to whether any further action is required. In this way, the LFR application works to assist SWP personnel to make identifications rather than acting as an autonomous machine-based process devoid of user input.

LFR and SWP

- 3.4 LFR has been trialled by SWP over a period of seven years. SWP believes that LFR is a valuable precision policing tool that helps SWP to keep the public safe and to meet its common law policing duties, which include the prevention and detection of crime, the preservation of life and limb, the preservation of order, and bringing offenders to justice.
- 3.5 The following are illustrative examples where LFR may assist SWP with its policing purposes:-
 - a) Supporting the location and arrest of people wanted for criminal offences;
 - b) Preventing people who may cause harm from entering an area (e.g. under football banning orders);
 - c) Supporting the identification of people about whom there is intelligence to suggest that they may pose a risk of harm to themselves or others (e.g. stalkers, terrorists, missing persons, sex offenders etc.);
 - d) Supporting the use of targeted preventative policing tactics in areas where intelligence suggests violent crime may be committed or there is otherwise a need to secure an area with a precise crime fighting tool to better deter those who may pose a threat from attending.

- 3.6 Whilst appropriate use of LFR as a precision crime fighting tactic delivers clear value to UK Law Enforcement and the public in turn, it is important to recognise that the use of LFR involves biometric processing. SWP is conscious that the use of LFR has been the subject of much debate. Areas subject of particular debate and scrutiny relate to the intrusion into civil liberties and the instances of false-reporting relating to the accuracy of LFR, the potential for wide-scale monitoring through the use of LFR, and the possibility for automated decision making as a result of LFR processing.
- 3.7 It is therefore incumbent on SWP to ensure that LFR is used lawfully and responsibly for legitimate policing purposes, and in a manner that is transparent. This will help ensure that public trust and confidence is not eroded by the use of LFR.
- 3.8 In seeking to address other potential concerns, SWP has facilitated academic research led by the National Physics Laboratory and has proactively engaged with civil liberty interest groups and South Wales Police and Crime Commissioner's Office. SWP has also commissioned the National Physical Laboratory (NPL) to undertake a ground-breaking equitability study on the use of LFR technology in an operational context to further build on the high levels of diligence already conducted on the FRT algorithm.
- 3.9 SWP has listened carefully to many parties with an interest in the use of LFR and has carefully considered what safeguards are necessary to support the use of LFR. Each Deployment must be carefully designed and have clear documented objectives. The Authorising Officer (AO) must ensure that their assessment and authorisation clearly articulates legality, necessity and proportionality. This assessment must also include consideration of whether the objectives could be achieved by alternative means including 'traditional policing' enquiries or Deployment to whether LFR can be deployed for a shorter period of time, at a different location or utilising less LFR assets.

Whilst considering proportionality, the AO should address how the public benefits from the use of LFR and how this compensates for any concerns the public may have with regards to how their human rights are engaged.

- 3.10 The AO must also consider how the Deployment of LFR may impact on communities as a whole, and how the rights of everyone whose image is likely to be captured by the LFR application have been considered, and what safeguards are in place to protect Communities.
- 3.11 The AO must also be satisfied that LFR Operators and LFR Engagement Officers involved with the Deployment are appropriately trained, briefed, and accountable. Also, that equipment will be used correctly, and that those involved in the Deployment mitigate against inappropriate responses to LFR application Alerts.
- 3.12 SWP is not only concerned with developing and implementing precision policing tactics that protect the public as effectively as possible, but also ensuring that new tactics, such as LFR, are monitored for impact. SWP will implement a robust governance process to review the effectiveness and impact of LFR Deployments on an ongoing basis. SWP will focus on delivering transparency and will achieve this by both responding to scrutiny as well as proactively engaging and involving a range of stakeholders, including people drawn from South Wales communities as part of an ongoing process.

3.13 This guidance document will continue to evolve to reflect changes in legislation, regulation, technology, and accepted use.

4. Strategic Intention, Objectives and Use Case

4.1 LFR Deployments must be run under a Written Authority Document that complies with the following strategic intentions and operational objectives.

Strategic Intentions

4.2 SWP will:-

- a) use overt LFR technology in a responsible way to locate offenders in accordance with SWP's common law policing powers. This includes targeting those wanted for criminal offences, those who pose a risk of harm and those wanted by the courts.
- b) comply with the common law and statutory safeguards in delivering its policing operational duties and relies on Common Law to discharge a number of its duties. LFR can assist with SWP's duties to protect life and property, preserve order and prevent threats to public security, prevent and detect crime, bring offenders to justice, and uphold national security. This includes targeting those wanted for offences. It also includes using LFR technology to protect the public, reduce crime and help safeguard vulnerable persons.
- c) strengthen and develop LFR technology capability to protect the public, reduce serious crime, to help safeguard vulnerable persons, and to keep South Wales Safe.
- d) build public trust and confidence in the development, management and use of LFR by taking account of privacy concerns and maximising transparency; and
- e) maintain good governance through a command structure that incorporates strategic, operational and technical leads for the Deployment of LFR, with clear decision making and accountability; and
- f) ensure that the Deployment of LFR is used in compliance with all applicable legal requirements, and that it meets the oversight and regulatory framework as presently outlined in England & Wales by the Biometrics and Surveillance Camera Commissioner, the Information Commissioner and SWP LFR Documents; and
- g) transparently identify, manage and mitigate reputational and organisational risk to SWP; and
- h) be recognised as a progressive, responsible and ethical organisation.

Operational Objectives

4.3 SWP will:-

- a) use LFR technology to enable SWP to discharge its common law policing powers. This includes the need to tackle our foremost operational priorities; and
- b) adopt a robust and proportionate approach in engaging and pursuing individuals identified on an LFR Watchlist, using human decision-making. Officer oversight is active and involved, with the officer retaining full control and making the decision on whether or not to take action; and
- c) engage with and provide reassurance to communities, listening and responding to concerns; and
- d) continually identify and review risks relevant to the LFR technology, mitigate those risks, and maintain a response plan should mitigation fail.

Technological Objectives

4.4 SWP will:-

- a) ensure all LFR technology is fit-for-purpose and deployed effectively in line with strategic intentions and operational objectives; and
- b) provide ongoing technical oversight and evaluation into the effectiveness of the technology as a policing tactic to bear down on violent crime and other imprisonable offences; and
- c) look to technological improvements whilst keeping the SWP LFR SOPS under review. Where appropriate SWP will trial alternative providers of facial recognition software and hardware in parallel with our current provision. This helps to ensure that the best possible service is sought, and we are able to proactively develop improved working methodologies and accuracy. The outcomes of any parallel trial will be captured with the same key performance metrics that are gathered when deploying LFR to ensure the findings are suitable for direct comparison and analysis. All previously detailed retention periods will remain unaffected.

Use of LFR

- 4.5 This guidance relates to the use of LFR in an overt capacity to help SWP protect the public. SWP will keep the use of LFR under review to ensure LFR continues to be used as an effective crime fighting tool.
- 4.6 LFR helps SWP use its resources more efficiently. SWP considers that LFR is better than humans at recognising persons from a large dataset (generally hundreds to low thousands) and quickly linking a Possible Match, whilst providing information that indicated why they may be of interest to SWP.
- 4.7 The use of LFR also helps minimise information sharing, as LFR offers an alternative to social media campaigns, or the sharing of information with external agencies. (It is acknowledged that considerations regarding data protection should not be considered as an absolute barrier to information sharing).

- 4.8 Locations for the Deployment of LFR will be kept under strict review, with LFR being Deployed into areas where it has the greatest potential to assist SWP in discharging its operational duties. The decision to deploy LFR will always be supported by a rationale that explains why a location was selected for LFR use in accordance with the principles set out in the Legal Mandate and other SWP LFR Documents.
- 4.9 Deployment of LFR will largely fall into one of three use cases. These are identified as:
- a) **Proactive Deployments:** These are routine deployments of LFR to locations within the South Wales Police area. These Deployments will be based on information and intelligence and crime data for those areas, including increases in types of crime and persistence of crime occurring at significant volumes at a given location.
These deployments will be focused around locations and access routes where LFR will provide the most benefit in discharging the operational duties of SWP. Watchlists will be linked to the purposes of the Deployment and there should be a reasonable suspicion that Subjects included in Watchlists may attend at the Deployment location.
 - b) **Event Deployments:** These Deployments are in response to specific events which are expected to attract increased public attendance to an identified location. These Deployments will support policing operations to ensure the safety of the public and the protection of critical infrastructure at the location. This will also include transport hubs and routes that can be identified as supporting attendance to the specified event.
An example of this would be a concert/ festival held at a rural location which would not normally attract attendance from members of the public.
Watchlists will be compiled based upon the location and nature of the event.
 - c) **Incident/ Intelligence specific Deployments:** These Deployments will be in response to a specific incident or in response to specific intelligence. The Watchlists for these Deployments will be limited to the geographical location of the Deployment and include individuals based on the Specific needs of the incident response or intelligence.
An example of this would be Deployment of LFR to a location where disorder has recently occurred and intelligence exists that the disorder may continue between identified individuals who have yet to be located.
- 4.10 Given that LFR requires a member of SWP personnel to review every Alert in real-time for a decision as to whether any further action is required, SWP will always deploy LFR in a way that is operationally effective and allows SWP to act on any Alerts as they are generated. LFR will not be used indiscriminately.

Deployment of LFR Assets

4.11 LFR can be deployed through three styles specific to the needs of the Deployment and the policing objectives. There may be occasions where more than one style is required to achieve the policing objectives. Examples of how LFR can be deployed are as follows:

- a) **Marked Police CCTV vans:** These are specialist CCTV vehicles equipped with computers capable of running LFR software. Where LFR is deployed via this method, each LFR van requires LFR Operators, LFR Engagement Officers and signage deployed outside of the Zones of Recognition to ensure that the Deployment is overt in nature and that members of public are able to understand and access information about LFR. A Deployment involving LFR deployed from specialist CCTV vans may involve a single van or a number of vans. It will be the responsibility of the AO to ensure that the number of vans deployed is proportionate to the policing objectives of the Deployment.

- b) **Wired CCTV cameras:** Wired CCTV cameras work in a similar way to CCTV vehicles. Cameras are used where CCTV vehicles would not be able to access specific locations necessary to achieve the objectives of the LFR Deployment. Cameras should be located near to LFR Operators and the LFR system. The location of the LFR system will be identifiable as a Police installation to ensure the Deployment remains overt and should be secure in order to ensure effective data protection.
 An example of where this Deployment style would be necessary would be access points to buildings or narrow routes where CCTV vehicles would pose risk to members of public as a result of obstructing evacuation routes.
 This Deployment style may not be as readily recognisable as marked vans. For this reason, additional signage and availability of LFR Engagement Officers should be a key consideration of the Deployment plan. The AO should also consider are there other means that are more overt in nature that would achieve the objectives of the Deployment.

- c) **Operation Gwalia:** *Operation Gwalia* is a semi-permanent network of police managed Rapid Deployment Cameras (RDC) (sometimes referred to as lamppost cameras) linked to a specialised Op Gwalia van, equipped with LFR software, where LFR comparisons occur¹. The RDC's will be marked with high visibility police markings and accompanied by additional signage outside of the Zones of Recognition when LFR is being operated in that area. This will ensure the Deployment is overt in nature and members of public can identify areas where LFR is deployed.
 The RDCs have been specially fitted to have no onboard memory, no audio recording capability and to only operate when the Op Gwalia van is in the vicinity. LFR processing will only occur in the Op Gwalia van, when the van is in the vicinity of RDC's and LFR processing is active. RDCs do not need to be providing a feed for LFR processing to be a part of the wifi mesh.
 Where Op Gwalia is deployed, the AO will determine the number of RDCs to be active are proportionate to achieve the policing objectives of the Deployment. The AO will ensure that there are sufficient resources available to engage with members of public where Op Gwalia is deployed and respond to any Alerts that occur where the Op Gwalia cameras are active. The AO must also be satisfied that the LFR Operators are trained to respond to any alerts and pass correct and accurate information to the Engagement Officers in a timely manner.

¹ The wifi mesh nodes are integrated into the rapid deployment cameras. Whilst numerous cameras may be deployed at any given time, they may not all be actively providing feeds that are being processed through LFR software but may still be active as part of the wifi mesh capability.

5. Overview of LFR Deployment Processes

End-to-End Process

5.1 The end-to-end process of an LFR Deployment can be summarised as follows:-

- a) LFR law enforcement purpose identified, safeguards considered, Deployment authorised, and Watchlist selected;
- b) Notification of Deployment, and signage deployed;
- c) As subjects pass an LFR camera, their faces are detected, and if the image quality is sufficient, they are compared against a Watchlist;
- d) If a Possible Match is found in a Watchlist, the LFR application generates an Alert and both the detected face from the video and the Possible Match image from the Watchlist are presented to the LFR Operator / LFR Engagement Officer for human review;
- e) The LFR Operator / LFR Engagement Officer will consider the Alert, noting the System, Subject and Environmental Factors, and together with the benefit of their experience and training, they will determine whether further action is required and whether the person is Engaged;
- f) Cancellation of authority for the LFR Deployment and post-Deployment evaluation.

5.2 SWP LFR SOP provides a greater level of detail about the processes involved in the Deployment of LFR by SWP. A flowchart summarising LFR Deployment can be found in Section 13 of this document.

Key Points

- a) LFR uses images from people within the LFR Zone of Recognition. No individual is 'targeted' any more than another unless they are on a Watchlist;
- b) The selection and placement of cameras is a vital consideration to ensure proper coverage of the desired area;
- c) The quality and resolution of images (both those in the Watchlist and those from the video cameras) are of vital importance and must be carefully considered;
- d) The inclusion of persons on a Watchlist needs to be justified based on the principles of necessity and proportionality.
- e) It is important to balance the objectives of the operation with the size of the Watchlist and the available resource to respond to Alerts. If the objectives are too broad and/or the Watchlist is too large, the amount of resource required to respond to Alerts may be prohibitively high.

Policing LFR Deployments Effectively

- 5.3 There must be sufficient appropriately trained resource deployed so as to be able to respond to Alerts. This is important in order to ensure that the LFR application, and the data processed by it, is being effectively used.
- 5.4 The volume of people expected to pass through the LFR Zone of Recognition will influence the rate of False Negatives, False Alerts, Recognition Time, and the probability of people from the Watchlist being observed by the camera (i.e occlusion) and their likely presence are all matters that must be taken into account when deciding what resources should be available.
- 5.5 It is also vital that SWP is transparent in its use of LFR under this guidance. As well as using signage, the provision of sufficient policing resource will allow officers to answer questions that the public may have.

6. Governance, Oversight and Impact Assessments

6.1 Following consultation the following stipulations have been proposed and accepted by SWP:-

- a) The overall benefits to the public must be balanced with public confidence of our use of LFR;
- b) It can be evidenced that the technology itself will not result in unacceptable gender or racial accuracy variance into policing operations;
- c) Each Deployment must be appropriately assessed and authorised, demonstrating both necessary and proportionate for a specific policing purpose;
- d) LFR Operators are trained to understand the risks associated with use of the LFR application, including how potential injustices may be caused through inappropriate responses, and that they are accountable for their actions;
- e) SWP, will develop and maintain robust governance and oversight arrangements that balance the technological benefits of LFR with their potential intrusiveness. These arrangements will meet the Home Office Biometric Strategy's requirement for transparency, whilst taking into account guidance from the Surveillance Camera and Biometric Commissioner. The arrangements will also focus on implementing a transparent and visible internal inspection, audit, and compliance enforcement regime.

Governance Framework

6.2 SWP LFR Documents address the stipulations detailed above. Governance and oversight of the use of the technology is approached in three stages, as follows:-

- a) Pre-Deployment;
- b) Operational Deployment;
- c) Post-Deployment.

Pre-Deployment

6.3 Authority to Deploy LFR is an operational one, where SWP Authorising Officer (AO) rank is set at Superintendent. In exceptional cases of Urgency, an officer below the rank of Superintendent, but not below the rank of Inspector, may authorise the Deployment of LFR.

6.4 Where an officer below the rank of Superintendent provides the authority, a Superintendent must be informed as soon as practicable. It is for the Superintendent to then authorise the Deployment to continue, making changes to the authority where they believe necessary, or direct that it must stop.

6.5 Prior to AO authorisation and the Deployment of LFR in public spaces, a number of documents must be completed and an SWP officer of NPCC rank² (or police staff equivalent) must be engaged by the AO. Whilst NPCC do not provide authority for LFR Deployment, consultation at this level exists so as to expose the proposed Deployment to an elevated level of strategic thinking, whereby issues are taken into account as much as possible. This affords NPCC the

² NPCC – 'NPCC rank' denotes an officer holding the rank of ACC or above.

opportunity to scrutinise the Deployment and to ask the AO to consider what mitigation is required to address concerns at hand.

- 6.6 The AO must notify the SWP Police and Crime Commissioner (or designated staff member) prior to any deployment.
- 6.7 SWP Ethics Committee are an independent source of advice. Their terms of reference include the provision of advice and independent oversight of SWP on ethical matters, and the promotion of ethical considerations within a legal and regulatory framework.
- 6.8 A number of specific SWP documents and records need to be completed in support of each Deployment. These are set out below:-

SWP LFR Deployment Specific Documents and Records	
LFR Application	Sets out the details of a proposed Deployment including location, Deployment style, number of LFR assets to be deployed, dates/times, legitimate aim, legal basis, necessity, proportionality, safeguards, Watchlist composition, and resources.
Written Authority Document	The AO's Written Authority provides a decision making audit trail demonstrating how the AO has considered the legality, necessity and proportionality of the Deployment of LFR, the safeguards that apply and the alternatives that were considered but deemed to be less viable to realise the policing purpose. The Written Authority also details the arrangements that have been made to manage the retention and/or disposal of any personal data obtained as a result of the LFR Deployment. The Written Authority Document must be retained in accordance with MOPI and other relevant legislation or policy and be made available for independent inspection and review as required.
LFR Deployment Record	Records details of where and when a Deployment was carried out, what resources were used, relevant statistics, outcomes and summary of any issues.
Assessments	These include the Community Impact Assessment, the Equality Impact Assessment, the Data Protection Impact Assessment, and the Surveillance Camera Commissioner's Self-Assessment. These documents need to be considered by the AO when authorising a Deployment to ensure they are sufficient to address the issues arising from the proposed Deployment. The AO must ensure that issues have been adequately identified, documented, and mitigated by way of safeguards such that the Deployment is not only necessary, but also proportionate to the policing purpose.

Deployment Logs	Logs completed in the planning and execution of an LFR Deployment. For example, logs completed by the Gold and Silver Commanders, LFR Operators and LFR Engagement Officers.
-----------------	--

- 6.8 Several other specific SWP documents pertaining to each SWP LFR Deployment have been completed centrally. These are set out below:-

SWP LFR Documents and Records	
SWP Data Processing – Appropriate Policy Documents	SWP policy on the processing of data pursuant to the Data Protecting Act 2018 and UK General Data Protection Regulation relating to LFR.
SWP Legal Mandate	Outlines the legal considerations to be addressed in order to use LFR.
SWP Training Materials	Provides the necessary training to ensure those involved in authorising and deploying LFR are familiar and implement the considerations relevant to its lawful, ethical and appropriate use.

Operational Deployment

- 6.9 Arrangements must be made to accurately record and log the dates, times and location of the Deployment.
- 6.10 The Silver Commander must ensure that arrangements are made to keep the use of LFR under review throughout the duration of the Deployment. The Silver Commander needs to be content:-
- that the use of the LFR remains necessary and proportionate for the policing purposes identified in the Written Authority Document; and
 - that the safeguards identified in the Written Authority Document remain effective; and
 - that the level of officer support committed to the Deployment is enabling Alerts to be responded to effectively; and
 - that the Subject, System and Environmental Factors are such that the use of the LFR application remains effective for realising the policing purpose identified in Written Authority Document.
- 6.11 Circumstances may arise that mean that there is a need to curtail or postpone the Deployment. Examples may include occlusion resulting in those sought not being presented to the camera in cases of excessive crowd flow, adverse weather/ lighting conditions or operational events changing the resources needed in the area. The Silver Commander must be empowered and have absolute discretion to suspend or terminate the Deployment. Further details are provided within the LFR SOP.

- 6.12 In any event, the Silver Commander must conduct and record a review of the activity at suitable intervals during the Deployment. The timing and frequency of reviews is determined by the Silver Commander. A suitable period should be determined in the context of the Deployment. This review should address the continued legality, necessity and proportionality of the Deployment, as well as providing some analysis on LFR application performance and the Engagements undertaken.

Post-Deployment

- 6.13 The use of LFR should be subject to debrief and review. This will help ensure that future Deployments reflect learning identified from each Deployment, and that the use of LFR remains an effective and proportionate policing tool. The structure and form of each review should aim to achieve a degree of independence from the Gold Commander and address the efficiency and efficacy of the Deployment.
- 6.14 Each Deployment should be subject of an authority cancellation, once no longer required. The LFR Deployment Record is submitted to the AO (this may be the same person as the Silver Commander) to ensure that appropriately senior oversight is maintained. Such reports should typically be produced and submitted within 31 days.
- 6.15 The outcome of LFR Deployments are subject to evaluation, which in turn should feed into oversight and scrutiny processes.
- 6.16 Post-Deployment, SWP must ensure that the processing of any personal data associated with LFR is conducted in a lawful way in compliance with SWP LFR documents. This includes that:-
- a) where the LFR system does not generate an Alert that a person's biometric data is immediately automatically deleted; and
 - b) the data held on any encrypted USB memory stick used to import the Watchlist is deleted as soon as practicable, and in any case within 24 hours, following the conclusion of the Deployment.
- 6.17 Where the LFR system generates an Alert all personal data is deleted as soon as practicable, and in any case within 24 hours.
- 6.18 All CCTV footage generated from LFR Deployments is deleted within 31 days, except where retained:-
- a) in accordance with the Data Protection Act 2018, MOPI and the Criminal Procedures and Investigations Act 1996; and /or
 - b) in accordance with SWP's complaints / conduct investigation policies.

7. Oversight Bodies and Regulatory Framework

- 7.1 Within SWP, the senior internal oversight body for LFR is SWP FRT & Biometrics Programme board, which in-turn answers to DSD Gold Board. In addition, the SWP commissioner's office also provide an external oversight and scrutiny perspective.
- 7.2 SWP LFR Legal Mandate sets out the legal framework for SWP use of LFR technology, whilst SWP LFR Policy Document and SWP LFR SOP support implementation.
- 7.3 Nationally, the 'NPCC Facial Recognition Technology Board' provides oversight for the operational uses of facial recognition within UK Law Enforcement.
- 7.4 Further oversight opportunities may arise in relation to the 'Joint National Biometric Strategic Board'. This is co-chaired by the NPCC and the Home Office Data and Identity Department, and involves representatives of the Information Commissioners Office, the Biometrics and Surveillance Camera Commissioner, and National Police Chief Scientific Adviser (NPCSA). More detail on these roles:-

- a) Biometrics and Surveillance Camera Commissioner (BSCC); The role of the Biometrics and Surveillance Camera Commissioner is to:

- keep under review the retention and use by the police of DNA samples, DNA profiles and fingerprints.
- decide applications by the police to retain DNA profiles and fingerprints (under section 63G of the Police and Criminal Evidence Act 1984)
- review national security determinations which are made or renewed by the police in connection with the retention of DNA profiles and fingerprints
- provide reports to the Home Secretary about the carrying out of his functions
- encourage compliance with the Surveillance Camera Code of Practice
- review how the code is working
- provide advice to ministers on whether or not the code needs amending

The commissioner is independent of government. The commissioner has no enforcement or inspection powers regarding surveillance cameras and works with relevant authorities to make them aware of their duty to have regard to the code.

See [About us - Biometrics and Surveillance Camera Commissioner - GOV.UK \(www.gov.uk\)](https://www.gov.uk/about-us/biometrics-and-surveillance-camera-commissioner)

- b) Information Commissioner's Office (ICO); The ICO upholds information rights in the public interest, promoting openness by public bodies and data privacy for individuals.

The Data Protection Impact Assessment must comply with Sections 35 – 40, (Principles 1 – 6) and Section 64 Data Protection Act 2018 and should be shared with the ICO.

See <https://www.gov.uk/government/organisations/information-commissioner-s-office>

- c) National Police Chief Scientific Adviser (NPCSA); The role of the Chief Science Advisor is provide Police Chief Officers with advice on all aspects of policy on science and technology.

- d) See www.gov.uk/government/groups/chief-scientific-advisers

8. Public Engagement

- 8.1 Public engagement must be supported by the use of online resources available to the public, which should be underpinned by a press and media strategy giving advance notice of Deployments. At and around the location of Deployments, notices providing information, including details of the Privacy Notice, should be distributed and feedback via email should be sought.
- 8.2 Operational briefings delivered to officers and stakeholders prior to Deployments should promote openness with the public and transparency about the use of LFR. Officers are encouraged to engage with the public to increase awareness of how LFR helps keep the public safe and how it helps bring offenders to justice. It is also helpful for officers to be in possession of information leaflets that can be handed out to the public. Such information leaflets should deliver important key messages aimed at promoting trust and confidence through improved understanding.
- 8.3 Key stakeholders, including the PCC's Office, may be invited to observe the planning and Deployment of LFR.

In Advance of Deployments

- 8.4 In advance of Deployments ensure that:-
 - a) LFR Deployments are notified to the public using SWP website and other appropriate communication channels (including social media); and
 - b) LFR awareness raising measures (e.g. signs and/or leaflets) are prepared to support LFR Deployment in line with SWP LFR SOP; and
 - c) literature is prepared for persons who may be Engaged (to include information outlined within a privacy notice); and
 - d) Officers are briefed on their powers and the limits thereof. In particular, it must be made clear that there is no power to require an individual's cooperation in having their image captured, unless either the threshold for arrest has been reached, or an Inspector or above has authorised the exercise of the power under section 60AA of the Criminal Justice and Public Order Act 1994 for a Constable in uniform to compel a person to remove anything that conceals their identity; and
 - e) external engagement is considered in discussion with SWP LFR team. It may be appropriate to pursue engagement opportunities with a number of stakeholders, including local authorities, and public consultative or ethical review bodies. It is important that engagement is coordinated and so the LFR team must be consulted prior to this kind of activity.

During Deployments

- 8.5 During Deployments ensure that:-
 - a) awareness raising measures are used in line with the SWP LFR SOP to ensure that the policing presence is overt such that the public can establish that LFR is being used and understand the nature of the data being processed; and

- b) notices with a brief explanation and reference to SWP website are available to hand out to the public on request; and
- c) information is offered to persons Engaged by officers in accordance with the policy referred to above.

After Deployments

8.6 After Deployments ensure that:-

- a) external engagement is considered in discussion with SWP LFR team. It may be appropriate to pursue engagement opportunities with a number of stakeholders, including local authorities, and public consultative or ethical review bodies. It is important that engagement is coordinated and so the LFR team must be consulted prior to this kind of activity; and
- b) engagement with stakeholders will be ongoing.
- c) SWP will publish information relating to Deployments on its website including:
 - (i) Deployment location
 - (ii) Date of deployment
 - (iii) Duration of the deployment
 - (iv) Number of LFR Assets deployed and style of deployment
 - (v) Number of Subjects included on a watchlist³
 - (vi) The minimum Threshold Setting authorised by the AO
 - (vii) Number of alerts
 - (viii) Number of positive alerts (separated into confirmed and unconfirmed)
 - (ix) Number of false alerts (separated into confirmed and unconfirmed)
 - (x) The false alert rate for that Deployment
 - (xi) Number of policing outcomes that occurred⁴
 - (xii) Number of faces scanned during the deployment⁵

8.7 Care must be taken to ensure that no personal data is published.

The information is available via:

[canlyniadau-lleoliadau-results-of-deployments-for-live-facial-recognition-lfr.pdf](#)

³ This is the number of Subjects included across all Watchlists. It is also pertinent to note that an individual may feature on more than one watchlist (for example suspect for offences and wanted on warrant). For the purposes of recording, this would be considered two inclusions in the watchlist.

⁴ This may include arrests, arrangements for voluntary attendance, street bail, and safeguarding actions taken

⁵ It is important to note that number of faces scanned is not a measure of number of people who have been scanned. This is the number of times the LFR software has identified a face and compared it to the Watchlist. The LFR software does not retain any information (biometric or otherwise) of persons who have been scanned so it is not possible to determine how many times a person may be scanned if they remained in the zone of recognition for a period of time.

9. Watchlist Considerations

Image Quality

- 9.1 The performance of the LFR system is heavily dependent on the quality of the images in the Watchlist. The best images are those that follow a custody or passport style image that conforms to the NPIA 'Police Standard for Still Digital Image Capture and Data Interchange of facial/Mugshot and Scar, Mark & Tattoo Images (full frontal face, neutral expression, uniform lighting and plain background)'. Further detail is included within the embedded PDF:

NPIA Standard Still
Digital Images.pdf

- 9.2 Where multiple images of a subject are available, consideration should be given to including these in the Watchlist where it is advised that they will improve the likelihood of locating those of interest to SWP.

Compiling the Watchlist

- 9.3 SWP Legal Mandate provides commentary on the legal considerations relevant to compiling a Watchlist in a lawful way. This means that the inclusion of images of Subjects in the Watchlist is necessary and proportionate, and that it meets the identified policing purposes.
- 9.4 Key points include ensuring the Watchlist is limited to the size needed to meet the policing purposes identified, and taking reasonable steps to be sure that the image used should accurately identify the individual being considered for inclusion on the Watchlist. SWP LFR SOP provides practical guidance on how to follow SWP LFR Documents, including SWP Legal Mandate.
- 9.5 The size of the Watchlist is relevant to the level of resource that should be available to support a Deployment. There must be sufficient resource available to manage the Alerts generated by the LFR application.
- 9.6 As explained in section 3 (LFR Overview), Watchlist composition is normally restricted to individuals suspected to be in the proximity of an area, and therefore where there is some possibility or likelihood of an individual passing through an LFR Deployment. How great that likelihood needs to be will vary between cases for inclusion, but in any case, should be considered against a number of factors. This means that an AO may deem it necessary and proportionate to authorise the inclusion of people to be included in a Watchlist, even though there may not be specific intelligence to say where in SWP force area they may be found. Factors for consideration in this respect include:-
- a) Severity of offence in question; this will often be relevant to the level of urgency associated with locating and arresting an individual. Many individuals change their behaviour, including the places they reside and frequent when they know that they are wanted for a serious offence;
 - b) Risk; The level of risk associated with an individual or the offence type sought, whether that risk is to the public or themselves;

- c) Deployment location; the specific characteristics of the Deployment location may increase the possibility or likelihood of an individual passing through as well as informing the scope and nature of the Watchlist. Areas around transport hubs have a lot of people transiting from place to place.

Governing the Watchlist

- 9.7 The systems used to generate the Watchlist are protected by role specific access control measures, and those using them are supported by role-specific training. This includes familiarisation with data protection principles.
- 9.8 SWP LFR Documents provide measures to ensure that the Watchlist is lawfully compiled, current, is not retained beyond its purpose, and is only used for its LFR purpose.

Addressing Disproportionality

- 9.9 SWP does not create or retain a breakdown of race, gender or any other protected characteristic⁶ of persons on a Watchlist. This mirrors the approach taken with the majority of policing tools used by SWP. The exception here is for inclusion of under 18's and under 13's as previously detailed.
- 9.10 The Deployment of LFR is driven by SWP policing priorities, intelligence-led assessments, both of which determine locality and the policing purpose. It is then the locality and policing purpose that determines the composition of the Watchlist. The individuals found on a Watchlist are included because there is a policing need to locate them, there are realistic prospects of doing so, and that need fits with the policing purpose driving the LFR Deployment.
- 9.11 The routine retention of data relating to protected characteristics would mean SWP holding and processing data in circumstances where it does not have a policing need to do so. In essence, holding the data would not alter the intelligence case or change the policing need to locate individuals placed on a Watchlist.
- 9.12 SWP recognises the need to ensure that the systems and processes it relies upon are not inherently biased, and in this context that they do not disadvantage individuals based on protected characteristics. Regular tests are carried out using police officers and staff volunteers who are 'seeded' into a 'Blue Watchlist'. The volunteers walk through the Zone of Recognition at the start of a Deployment to measure the number of times those subjects are present in the Zone of Recognition against the number of Alerts generated.
- 9.13 SWP also carries out academic equitability testing of the LFR system when necessary – such tests, including with the National Physical Laboratory have been documented. The necessity and frequency are determined by factors that could affect performance, including the introduction of new and upgraded equipment, software or algorithms.
- 9.14 When equitability tests are conducted, no biometric data belonging to members of the public is retained for the purpose of the tests. As part of these tests, a human operator monitors and

⁶ As defined in Section 4 of the Equality Act 2010.

records perceived gender, ethnicity, age and any other relevant protected characteristics, of persons passing through the Zone of Recognition during an LFR Deployment.

- 9.15 SWP has a number of measures to guard against a System Factor (system bias) affecting the generation of Alerts. For example, being more likely to generate False Alerts based on individuals sharing the same perceived ethnicity or gender. These measures include that:-
- a) those involved in an LFR Deployment monitor Alerts, Subject Factors, System Factors and environmental Factors throughout the Deployment. Should concerns arise that the LFR system is not performing correctly, the Silver commander will halt the Deployment where necessary; and
 - b) for the purpose of facilitating post-Deployment reviews, Alerts are retained for up to 24 hours. It provides further opportunity to consider the Subject, System and Environmental Factors, Alert reliability, and the effectiveness of the safeguards in place for the Deployment, including the reviews undertaken by Silver and Gold during the Deployment; and
 - c) in the event post-Deployment reviews identify an area of concern, SWP may undertake further equitability testing where this appears necessary.

10. Testing Equitability

- 10.1 In August 2021 SWP was awarded Home Office Science, Technology, Analysis & Research (STAR) funding to undertake testing of the accuracy and equitability of FRT in an operational environment for LFR, OIFR and RFR.
- 10.2 In collaboration with the Metropolitan Police (MPS), this work was awarded to the National Physical Laboratory (NPL) at the end of 2021. The NPL is a prestigious world-leading centre of excellence that provides cutting-edge measurement science, engineering and technology to underpin prosperity and quality of life in the UK. In order to deliver on the objectives of the research, it was necessary to use LFR in the operational use cases of UK Policing. Data collection for the evaluation took place in July and August alongside five operational deployments of LFR, four in London and one in Cardiff.
- 10.3 A cohort of volunteers were selected to take part in the study who were of varying age, gender and race, the volunteers were seeded into the crowd passing the LFR System at each Deployment so as to appear in the LFR video footage.
- 10.4 The data was then evaluated 'post event' with a balanced Watchlist and mated facial photographs taken of the volunteers in a variety of settings to realistically replicate the use cases for LFR, RFR and OIFR.
- 10.5 The full results are presented in the National Physical Laboratory's commissioned report 'Facial Recognition Technology in Law Enforcement Equitability Study'.

What does this study tell us about accuracy of SWP's FRT?

- 10.6 The NPL report gives us an impartial, scientifically underpinned, evidence-based robust analysis of the performance of SWP's FRT System in operational conditions in terms of (i) accuracy and (ii) equitability (bias) related to subject demographics.
- 10.7 In summarising the performance of LFR in operational environments, NPL have provided performance figures for two different Watchlist sizes: (i) a Watchlist of 10,000 reference images, which is broadly in line with those used on the MPS' LFR operational deployments to date and (ii) a watchlist of 1000 reference images a size more typical for SWP LFR deployments.
- 10.8 The performance figures use industry standard measures; (i) True-Positive Identification Rate (TPIR) (also known as True Recognition Rate)– the rate of successful recognition when subjects on the Watchlist pass through the Zone of Recognition (ii) False-Positive Identification Rate (FPIR) (also known as False Alert Rate) – the rate of incorrect recognition (i.e., false positives or false alerts) when subjects not on the Watchlist pass through the Zone of Recognition
- 10.9 The table below shows the results of combined data from all five deployments:

Watchlist size 10000			Watchlist size 1000		
Metric	Threshold Setting	Result	Metric	Threshold Setting	Result
TPIR	0.60	= 89 %	TPIR	0.60	= 89 %
FPIR	0.60	≈ 0.017 % (1 in 6000)	FPIR	0.60	≈ 0.002 % (1 in 60,000)

Did the study find any differences in SWP's FRT?

- 10.10 In relation to LFR, NPL found that at a Threshold of 0.60, any differences in TPIR by gender, by race, or by race/gender combined were not statistically significant. This means that the systems performance is not biased towards any race or gender. The study has shown that at Thresholds of 0.60, 0.62 and 0.64 the number of subjects where a False Positive alert was generated is very small and there is no statistically significant imbalance between demographics.
- 10.11 The study has shown that at a Threshold Setting of 0.64 or higher there were no False Alerts generated. Thus, at this Threshold the FPIR is identical for race, age and gender.
- 10.12 In relation to age, the NPL found that at a Threshold of 0.62 the observed differences in TPIR were not statistically significant. At a Threshold of 0.60, the observed variation in TPIR did show statistical significance with TPIR improving with subject age. This means that the system is slightly more likely to locate those sought as they age, but not more likely to inconvenience those of younger age, as the FPIR is found to be equitable between gender, race, and age. There is no statistically significant imbalance between demographics. In relation to trying to locate those of younger age, the NPL report stated;
- ".....the lower performance of the under 20s is therefore assessed to be due to both demographic and environmental factors, these being a combination of subject age and as a result subject height, and crowdedness in the zone of recognition....."*
- 10.13 Where SWP is particularly seeking to locate those of younger age and whom maybe of a shorter stature, consideration should be given of how busy the area is. The risk that subjects may be shielded from the camera by a taller person walking in front of them and blocking the camera's view must be considered. Deployment locations and camera positioning should form part of the technical optimisation process.

- 10.14 Reflective of the need for continuous improvement, SWP will continue to monitor its FRT performance, in terms of both overall system accuracy and demographic differential performance going forward.

11. Design Guidelines for LFR

- 11.1 A new international standard (ISO IEC 30137-1:2024 'Use of biometrics with video surveillance systems, Part 1: System design and specification') was published in May 2019. See [ISO/IEC 30137-1:2024 - Information technology — Use of biometrics in video surveillance systems — Part 1: System design and specification](#).
- 11.2 ISO IEC 30137-1:2024 provides additional detail covering technical aspects of specifying and implementing a facial recognition system for use with video cameras, including camera selection and placement, adjustment of detection and matching Thresholds, Watchlist management, and the role of the LFR Operator. It is strongly recommended that forces considering the use of LFR use the guidance to supplement the technical overview provided here. SWP has done this.
- 11.3 SWP LFR processes and associated guidance has been developed so as to provide for a reliable means of locating individuals using LFR with high definition CCTV cameras (2MP and above). For a recognition system to deliver the desired results, all components need to be optimised and interoperate correctly. These system components include the hardware, the software, the LFR Operator, and associated policing resources on the ground.
- 11.4 A system using facial recognition will consist of many components. Those components that do not directly relate to the successful use of facial recognition are not considered in this guidance. Directly relevant components include:-
- a) the cameras, including cabling and/ or network capability, and their placement; and
 - b) the environment in which the cameras operate; and
 - c) the database of reference images and associated meta data, often referred to as the Watchlist; and
 - d) the facial recognition software that detects faces in the video feeds, converts the facial images into Templates, compares these against the Watchlist and provides information on the results of the comparison (generally in the form of an Alert or a numerical score) to an LFR Operator; and
 - e) the LFR Operator and LFR Engagement Officer who assess Alerts and determine the appropriate course of action; and
 - f) having sufficient officer resource available to support the Deployment.

12. Cameras and Camera Placement

- 12.1 Cameras must be selected so that the image resolution, frame-rate, field-of-view and low-level light performance can provide images of sufficient quality for use in the facial recognition application. Current FR systems typically require a facial image with between 20 and 100 pixels between the centres of the subject's eyes (Inter-Eye Distance or IED). The FR vendor should advise on specific requirements for their system.
- 12.2 Unless the environment is well controlled, cameras must be capable of operating at Wide Dynamic Range in order to generate high quality images under a variety of lighting conditions.
- 12.3 Cameras should ideally be positioned to capture faces as close as possible to the 'face-on' condition, similar to a passport image. This typically requires the cameras to be much lower than is normally the case for existing CCTV. Camera placement and angle should be further considered where those sought may be more likely to be occluded in a busy crowd in order to maximise the prospects of location.
- 12.4 Ideally the environment should be managed such that every face is evenly illuminated. Highly directional lighting, for example strong sunlight, should be avoided, which may require consideration of how the lighting will change throughout the day.
- 12.5 In general, the Zone of Recognition will be smaller than the field of view of the camera; for example, not all faces in the field of view may be in focus and not every face in the field of view will be imaged with the minimum necessary Inter-Eye Distance (IED).
- 12.6 A typical 2MP camera will provide sufficient resolution for LFR to work on a maximum of 3 to 4 people side by side. Therefore, consideration needs to be given to camera location and the physical environment. For example, looking for opportunities to funnel or restrict the movement of people within the Zone of Recognition. However, if the flow is reduced beyond a certain level, individuals may be grouped very close together, occluding or partly occluding the faces of people (people behind people).
- 12.8 Detection and processing of faces is an intensive task for a computer system. The supplier of LFR software should provide guidance on hardware requirements and the number of faces that can be simultaneously processed from within a single frame. If the system is set to process too many faces, this will potentially result in delays to the LFR system response. It may also result in missed Alerts due to 'dropped frames' where the software skips some of the video footage in an attempt to catch up.

13. Key Performance Metrics

- 13.1 This section covers some of the key performance metrics that should be gathered when deploying LFR. It outlines the minimum requirements and so additional metric or indicators may well be relevant and suitable for collation and analysis. There are two key metrics that determine the 'accuracy' of an LFR system. These are detailed in the below paragraphs.

True Recognition Rate

- 13.2 The number of times when individuals on a watchlist are known to have passed through the zone of recognition and the LFR system correctly generated an alert, as a proportion of the total number of times when these individuals passed through the zone of recognition (regardless of whether an alert is generated).
- 13.3 This metric can only be generated by 'seeding' known subjects (for example police officers or staff) into a Blue Watchlist and measuring the number of times those subjects are present in the Zone of Recognition against the number of Alerts generated. Users of FR systems (and vendors) must not focus so closely on maximising this metric, that they increase the False Alert Rate to inappropriate levels.

False Alert Rate FAR

- 13.4 There are two types of False Alert Rate (FAR) measurements. The first is the System FAR, which is the number of False Alerts generated as a proportion of the total number of subjects processed by the LFR application. The second is the Operational FAR, which is calculated in the same way, but is measured after the LFR Operator has reviewed the output from the LFR application, and dismissed LFR application Alerts assessed by the LFR Operator as false.
- 13.5 All of the TRR and FAR metrics should be recorded and reported. Operational experience to date suggests that in most scenarios the FAR should be 0.1% or less (i.e. less than 1 in 1000). It should be noted that the FAR is greatly affected by the number of subjects processed by the LFR application, and to a lesser extent, the size of the Watchlist. This is a key reason why the number of persons included on the Watchlist needs to be kept as small as possible, whilst still meeting operational objectives.
- 13.6 It should be also be noted that the configurable Threshold (the point at which two images being compared will result in an Alert) will have a direct impact on the TRR and FAR. The Threshold needs to be set with care so as to maximise the probability of returning correct Possible Matches, whilst keeping the number of False Alerts to acceptable levels.

Recognition Time

- 13.7 A third important metric is the Recognition Time (RT). Note that the actual amount of time taken to act on an Alert will always be longer than the RT as additional time is needed for the LFR Operator to assess the Alert and to pass to an LFR Engagement Officer to then make a final decision on whether to Engage or not.
- 13.8 The RT must be sufficiently small that an effective response to an Alert is possible before the subject has moved too far from the point where the initial Alert occurred. High resolution

video cameras with multiple faces in each frame will require significant processing power if the RT is to be fast enough to enable a real-time response.

14. LFR Guidance Summary

- 14.1 This guidance relates to the operational use of LFR, and the governance and oversight regimes necessary to support Deployment.
- 14.2 It is strongly advised that officers and staff adhere to the guidance as this will help ensure that SWP use of LFR successfully and lawfully serves the public whilst providing necessary safeguards. It is also important to maintaining the trust and confidence of the public as well as our partners and other stakeholders.
- 14.3 It is recognised circumstances may arise where for valid reasons, a decision is taken that it is necessary to things slightly outside of this guidance. This guidance will no doubt evolve as technology changes and improves, and as learning influences what is recognised as good practice. Where decisions are taken that are at odds with some aspects of this guidance, it is essential these decisions are fully documented, together with detailed rationale, and that the relevant decision-making features within debrief and evaluation processes.
